DETAILED ACTION

Election/Restrictions

Claims 30-43 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/8/09.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of the Japanese '767 publication (Japan). APA is the process discussed early in the specification which includes the claimed process except for the effecting of an excitement treatment, resulting in poor coagulation of the powder. Japan solves this problem by microwaving the powder during treatment. In order to realize good coagulation properties, it would have been obvious for one of ordinary skill in the art to modify APA by effecting an excitement treatment of microwaving the powder during treatment, taught to be desirable by Japan. The limitations of the dependent claims are found in APA or would have been obvious process steps only once the basic process was known.

Response to Arguments

Applicant's arguments filed 5/19/09 have been fully considered but they are not persuasive. The only argument is that applicant is claiming the treatment done by plasma discharge while the prior art shows a microwave treatment. While this is true, the specification states that any type of electrical treatment may be used e.g. page 5, paragraph 4. Thus, the substitution of microwave with plasma discharge would have been well within the scope of one skilled in the art since plasma discharge is a known electrical treatment.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
